

Dear reader

My dearest reader, welcome to a journey of discovery. Together, you and I are going to gain insightful information, some of which might already be known to us, but has never been given much heed. I promise you that there will be many moments of awakening, as well as moments of enjoyment and learning. You might find some of the theories and facts unsettling and difficult to comprehend at first. However, I assure you that you will treasure the experience. Some of the ideas might be very provocative, and trust me, my dearest reader, that is by design. You will be intrigued and provoked, and, by the end of this journey, you should feel enriched, inspired and insightful.

As I have mentioned in my other book, *The Ideal Future Marital System*, I have always been fascinated by the universe, life and humans. My interest has always been in knowing why things are the way they are, in knowing

and understanding how the universe works. I have made it my mission to do some research on the universe, life and humans. When it comes to humans, I follow everyone's question: where do we come from, and where are we headed? I have come to believe that everything that you see, hear, or know today is not new – I am securely convinced that nothing is new in this universe. I am convinced that everything that is happening now has happened before. I therefore figured that if I am to know about the future and understand the present, the only path that leads to those answers is one that goes backwards, into the past. In life, almost everything has a reflection. This means that the past mirrors the future. The past is, therefore, where I will be looking, as I am hoping to see the future in its reflection. I will be sharing some ideas, theories, discoveries and revelations on this journey.

Everything has a beginning, and like everything else, life has *the* beginning as well. To understand why life exists, one needs to go back to the very beginning of time and learn about the very essence of life. This is where one derives the most fundamental aspects of living, often referring to the core meaning or purpose that drives an individual's existence. This can vary from person to person depending on their values and beliefs, but often encompasses elements like love, connection, growth, contributing to something larger than oneself, and experiencing life fully and meaningfully. It troubles every single person alive not to know

and understand the reason for their existence. It is a never-ending battle that we wrestle over and over, for as long as we are alive. In this book, we are going to uncover a lot of the important aspects of life. We are going to try to make sense of most things that are happening *to* our world and *to* our lives. In an attempt to make sense of what is happening on this planet, I have tackled tough topics and addressed concerns that are common to most people. I went as far as attempting to find a link or similarities between life in the past world and life in the modern world. Before we explore and learn more about the universe, life and humans, let me take this opportunity to thank you for choosing to read this book. My dearest reader, I promise you enjoyable reading, inspiring stories, profound insights and learnings that one can never forget. Some of the insights that you will find in this book are more futuristic, but also more important to know. It gives one a glimpse of what this universe can look like in the future. In the reflection of the past, we will see the future unfolding. I assure you that when you are done reading this book, you will never feel the same again. I don't want to keep repeating myself and keep you in suspense, so please turn the page and see what awaits you.
